

The Soft Dev Employees database is a **fictitious database** created by ExploreAI Academy for demonstrating and teaching database concepts and SQL (Structured Query Language).

The **Soft Dev employees** database displays the data for a **fictitious company's software developer employees** in a single table called **Employees**, and is meant to demonstrate table normalisation concepts. Figure 1 and Table 1 depict the current state of the Soft Dev Employees database.

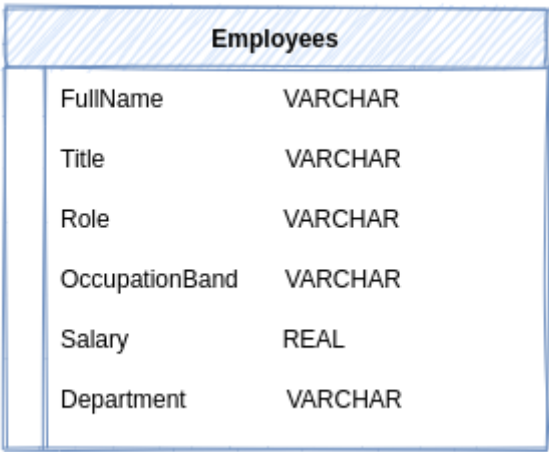

Figure 1: The ERD for the Soft Dev Employees database

Table 1: The data model for the Soft Dev Employees database.

Employees table		
This table contains details about company employees, including personal information and job-related data.		
Column name	Data type	Feature description
